

PROJECT: Design/Build a secure online database for all JobTracker data

Silverwarre will work with the ADA to design, build and implement a secure online application that handles all JobTracker data from submission to archive.

Advantages:

- All JT data in one place
- No more separate files or importing
- No more FileMaker licenses
- Complete set of filtering/sorting and custom-reporting tools
- Removal of outdated fields

Screens:

- 1. New project intake form** (user)
 - Lean form, based on Scott's work
 - No multiple components
 - Generates unique job number
- 2. Dashboard** (admin)
 - Login (cookie that lasts ~2 weeks)
 - Defaults to list of all current year projects, sorted by date
 - New request alert
 - Toggle to display different years
 - Quick filters: View Active, All, Completed
 - Line items include: Job Number/Letter, Client, Project Name (truncated), Code, Date In/Out, Status, Edit/View button
 - Keyword filter
- 3. Job Detail** (admin)
 - All data for a project, grouped
 - All fields editable
 - Save button
 - Cancel button
- 4. At-a-Glance/Status** (admin)
 - Basic fields of active projects (columnar)
- 5. Accounting/Fulfillment** (admin)
 - Columnar list of fulfillment data

Users:

-  **Superadmin**
Manages content and admin users, can delete records
-  **Administrators**
Manages content
-  **Users (clients)**
Request form access only

Admin Nav:

- Dashboard (status)
- Create a Report
- New Project button
- Admin Users (super admin only)
- Export button (current found set)
- Search (outside of found set)

PROJECT ESTIMATE

Prepared: March 28-29, 2024

Tasks:

- Pull together a framework of PHP files and includes. Set up an admin login process
3-4 hours
- Setup of database table based on existing data, and importing of past data
2-3 hours
- Wire up new version of form and update data structure based on new or eliminated fields
1-2 hours
- DataTables setup with all of the various features previously discussed
4-6 hours
- Screen design/php, css coding
18-24 hours
- Database backup setup
2-3 hours
- Project Management
3-4 hours
- Testing
1-2 hours
.....
34-48 hours total

Schedule:

Once we have a complete set of JT data, and assuming no schedule conflicts, Silverwarre will author and complete the project in the time frame below.

2-3 week turnaround

Costs:

The range below is a not-to-exceed estimate based on our current understanding of the project. Assumes no change of scope or project parameters. Any such changes will be flagged and discussed prior to any additional work or incurred cost.

\$3,400 - \$4,800 (development)
\$30/month (hosting/SSL)

JOBTRACKER SUPPORT

Curt Silvers

Project Lead, User Interface Designer, PHP/CSS Coder, Application Support

312.213.5085

curt@silverwarre.com

Chris Edwards

Lead Database Developer and Admin, Server/hosting Support

425.309.1971

chris@cledwards.net

Support for the online **JobTracker** application and its server-side and database components is available via the contact info listed here.

Within almost any scenario, Curt and Chris are able to respond to requests within the hour. While we don't anticipate issues with the application, we will treat any as a priority and will address any fixes necessary asap.

ABOUT SILVERWARRE

A bit about us:

Silverwarre has been helping clients with all manner of projects since 1993. Web applications, marketing materials, logo animations, presentations, video/ photography, database apps, websites, and many others in between.

Curt and Chris have been working together for 27 years. mostly in the web arena to create database-driven web sites for clients who need both a professional front end and a dashboard admin component to manage their data.

Curt's background is in design, user interface and animation. He has built over a hundred websites and worked on projects for McDonalds, Amoco, Koei Games, Searle, and countless others.

Chris' experience building and supporting websites dates back to the late 90s. He has a strong background with both Windows and Linux hosting environments. His current focus is building database-driven websites using PHP and either Microsoft SQL Server or MySQL database platforms.

The original JobTracker application was authored in 1999 and supported by Silverwarre ever since. Changes to the application and backups were steadily done for 15 years prior to FileMaker being more thoroughly integrated into the ADA flow, at which point Silverwarre has provided as-needed support.

Silverwarre has been working with the ADA for 25 years, authoring two job flow applications, and is thrilled that JobTracker remains an important part of ADA's Creative Services area. Upgrading to an online system has long been a goal and we're pleased that we are finally making this happen.
